

Feature Prioritisation for Edamam Recipe Search Program

Must have

- ☒ Ability to search for recipes by ingredient
 - ☒ Display basic information about each search result such as the recipe name and url
 - ☒ Error checking and handling for all API calls. This includes handling scenarios where the API is unavailable, the requested ingredient doesn't exist, or the API response is not as expected.
 - ☒ Informative error messages for the user, so they understand if something went wrong and why.
-

Should have

- ☒ Information output is relevant, user-friendly and well-formatted
 - ☒ Requests for input are clear and specify the type of format
 - ☒ Error handling and feedback are implemented in the case of incorrect or invalid input
 - ☒ If no results are found, helpful feedback is given
-

Could have

- Ability to save the search results to a file
 - Order the results by weight or another piece of data
 - Ask the user additional questions to decide which recipe they should choose
 - Cross-reference the ingredient against the Edamam nutrition analysis API
 - Ability to list more than 10 recipe results
 - Ability to display next and previous pages
-

Won't have

- Ability to display recipe images
- Ability to list more than 10 recipe results on a page
- Graphical interface
